## Integrated Site

This section contains guidelines and tools to create an Integrated Site with the Allianz look & feel for national needs. In this e-StyleGuide, we use the term "Integrated Sites" for web sites integrating content and services for various target groups (e.g. private customers, business customers, talents, investors etc.), presenting them in a manner appropriate to the digital medium.

## General Structure

>1 [Description](#)  
 >2 [Don't](#)

### Description

The general structure of the pages consists of the following parts:

**A Background Picture:**

The sketch-like drawings in the background compose the World of Options — a fixed corporate design element of the digital Allianz look & feel (see [Background Pictures](#)).

**B-C Navigation:**

To offer the user the maximum amount of content and services in a structured manner, horizontal and vertical navigation tools are needed. The horizontal navigation tool (B) contains the 1st and the 2nd navigation levels, offering easy access to the main website sections. The vertical navigation tool (C) is used for the 3rd and 4th navigation levels.

**D Content Area:**

In this area the main content of the web page is presented. The content modules can vary according to the page types (see [Modules](#)).

**Structure**

In order to guarantee a consistent and familiar usage logic and layout of our web pages, the basic page structure is standardized.

This section gives an overview of the basic page structure. The graphic shows how the web page is divided into five areas:

- A: Background Picture
- B-C: Navigation
- D: Content Area
- E: Related Area

## Index Page

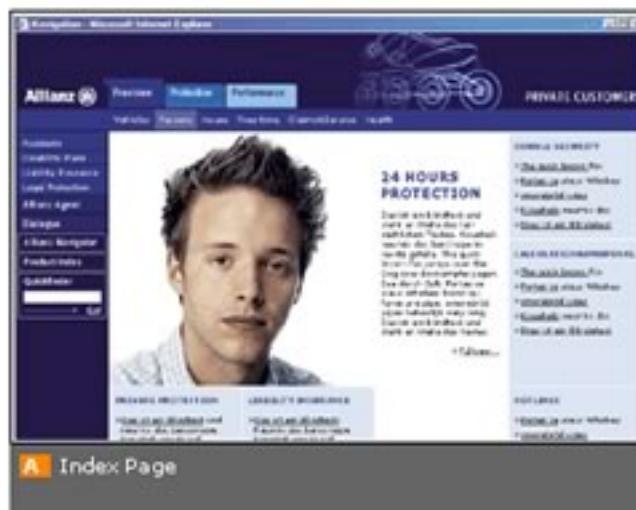

- > 1 Idea
- > 2 Description
- > 3 Don't
- > 4 Download

### Idea

Index pages display only topics with a greater depth of information. The index page introduces subtopics related to the selected topic on the 2nd navigation level. One subtopic is presented in an opener, which emphasizes an article or e-service that is important to the user. Other subtopics are organized within link containers.

Link containers on the index page provide access to related subtopics on the 3rd navigation level, or to contents in other areas of the web site.

The content sequence of link containers is described in the Content Structure Guide. See Content Structure Guide (German version).

**Idea/Description**

There are different navigation possibilities in the content area, depending upon the respective page type:

**Content area navigation for the index page:**

Navigation possibilities for the content area of the index page include links to additional articles (see Index Page).

**Content area navigation for the content page:**

Navigation possibilities for the content page include cluster links (A), which enable navigation between longer articles distributed over a number of content pages (see Cluster Links).

## Next Releases

The e-StyleGuide version 1.6 was launched in 2000. Since then local companies have used it when creating, designing and relaunching web sites. Because of the implementation of the e-StyleGuide, the Allianz Group is one of few companies with consistent design among its various web sites.

The continuous upgrade and enhancement of the e-StyleGuide is a top priority of Allianz Group Marketing. Quarterly releases are planned for the future. Beginning with the e-StyleGuide version 2.1, you will find an overview of future releases [here](#).

**Content Page****Description Content Page 1**

The content page 1 consists of the following elements:

**A Background Picture:**

The content page continues with the background picture that is used on the respective index page.

**B Main Navigation:**

Content pages are usually located on the 4th navigation level. They can be located on the 2nd navigation level if there are no index pages, or on the 3rd navigation level if there are no subindex pages.

**C Main Header:**

The main header consists of a content picture (**recommended**), color surface and headline. The color of the surface corresponds to the active tab in the 1st navigation level

## Portraits

- >1 Idea
- >2 [Description](#)
- >3 Don't
- >4 Download

### Description

Portraits have the following characteristics:

**Portraits on the home page:**

The use of portraits on the home page is a special case. They are positioned in front of the background picture.

The portrait is about 478 pixels wide and about 337 pixels high. A number of portraits can also be displayed at random each time the user loads the home page.

**Portraits on the index page:**

Large portraits are used on index pages. Each portrait corresponds to a topic. The illustration spans two columns. The height is 312 pixels. Portraits are cut out and have no border.

Different portraits are offered in the download section. Detailed picture parameters are available for shooting (see below) if additional portraits are needed.

## T

## Tabs

Tabs (also known as the 1st Navigation Level and Devices) offer intuitive, thematic access to the desired content. Names of Tabs should be understandable and consistent and be limited to the most important navigation points.

> [Device](#)

## Tables

Tables can be used on Content Pages, and their design and organization is dependent upon their contents. Tables can span one, two or three columns. Wider Tables should be created in a pop-up.

## Teaser Links

A Teaser Link is a link that is displayed in a Link Container.

## Teaser Containers

The three Teaser Containers (a type of Link Container) on the Home Page emphasize important articles and e-services. Each Teaser Container includes a maximum of five links.

> [Link Containers](#)

## Text Modules

Text Modules display information on Content Pages. Text Modules might consist of a Main Header, Body Copy, Summary, a Bullet List and Tables.

## Tickers

Tickers can be used to display lead stories and financial news. Tickers should only be used on Home Pages or on Content Pages containing financial information. Ticker contents should have high update frequencies (e.g. stock information).

## Concept of B2C, Germany

>[contact](#)

The Allianz.de Business to Customers (B2C) web site was conceived as a vertical portal for Safety and Future Financial Planning. The web site presents information and e-services to private customers in the three fields of Protection, Provision and Performance. It also gives the company a visual representation and presence on the Internet.

### Objectives

The B2C web site offers safe decision-making support in the counseling and application phase, as well as valuable post-contract completion information. The contents and design communicate competence, quality, empathy, closeness to the customer, as well as modernity and trust. The B2C web site also represents strength, security, problem awareness and superior counseling and service, in comparison to competing companies.

### Target Group

Private customers are the target group for the Business to Customers site.

The private customer profile matches that of the "Strategist" in Germany (Source: sinus sociovision, 01/2000). >[Socio-cultural map](#)
